Executive Summary

Freedom Budget 2005 continues the tradition of JLF alternative budgets that revise the governor's Continuation and Expansion budgets. If an item is not included here, the author accepts the governor's proposal. This includes all pay raises for state employees and some tax changes. The specific recommendations detailed in this report are made as additions or subtractions from Gov. Easley's budget.

Among the \$1.1 billion in General Fund savings for FY 2005-06:

- Redirecting \$60 million in projected spending on non-teaching positions in public schools to fund teacher pay raises and class size reductions.
- Increasing in-state tuition at UNC campuses to cover 35 percent of costs, up from 21 percent. Combined with reductions in taxpayer funding for the UNC Hospitals and research overhead, the plan calls for immediate savings of \$172 million.
- Reforming the state Medicaid program to bring its costs in line with the Southeastern average within two years, saving \$151 million in FY 2005-06. Changes would be made in eligibility, coverage, and reimbursement policies.
- Converting the Smart Start program into a more targeted preschool program for at-risk children and a separate package of state income tax credits for preschool expenses, education, and child health insurance.
- Eliminating roughly \$170 million in subsidies for corporations in dozens of separate programs and credits, including a 72 percent reduction in General Fund support for the Commerce Department.
- Selling the North Carolina Railroad and stateowned ports at Wilmington and Morehead City, using the proceeds to reduce debt. Together with a two-year delay in issuing some bonds, these ideas would reduce debt service by \$108 million in FY 2005-06.

- Offsetting more than \$23 million in expenses for state-run enterprises and attractions such as museums by charging higher users fees and soliciting more private donations.
- Reducing administrative expenses throughout state government and merging related departments into a Department of Public Safety and a Division of Disability Services for combined savings of \$55 million.

Freedom Budget 2005 includes some areas with higher spending than in Gov. Easley's budget including:

- Restoring \$15 million in school construction funds.
- Boosting pay increases for state employees to 4 percent (\$168 million).

Highway Funds

Outside the General Fund, FB05 recommends \$234 million in savings in the governor's FY2005-06 transportation budget, including elimination of subsidies for rail, reductions in paving of rural secondary roads, and an immediate end to funding for the Global TransPark. These savings are combined with \$233 million saved by ending the diversion of funds from the Highway Trust Fund to finance higher spending on road and bridge maintenance (\$207 million), urban loop construction (\$58 million), and other road construction (\$182 million).

Taxes

Freedom Budget 2005 includes a comprehensive tax reform proposal for North Carolina. This proposal would end income tax preferences and biases worth \$347 million in FY 2005-06, while saving \$1.1 billion in FY2006-07 taxes:

 Over two years, the plan would eliminate the current 7.75 percent and 7 percent income tax brackets, creating a flat marginal rate of 6 percent. This would save taxpayers \$765 million.

- The corporate income tax rate would fall from 6.9 percent to 6 percent, saving \$127 million.
- Families would get a refundable Smart Start tax credit of \$200 per preschool child, saving \$114 million. They could also deduct the first \$1,500 of education spending or saving, worth \$33 million.
- The plan would reinstate refundable tax credits for long-term care insurance worth \$6 million and child health insurance worth \$18 million.
- Finally, *Freedom Budget 2005* repeals the "temporary" income and sales tax increases of 2001 as scheduled. These moves would save taxpayers \$500 million in FY 2006-07.

Introduction

Billion-dollar deficits have become a tradition in North Carolina and are now a structural problem. Gov. Mike Easley acknowledges the profligacy of the late 1990s and has slowed spending growth from that heady era, but he has not reversed the expansions of Smart Start, Medicaid, and other programs enacted under the previous administration. He has instead added new programs and sought numerous ways to raise taxes on nearly every segment of the population, even as the federal government seeks to ease the tax burden on individuals.

In addition to the principled reasons to oppose higher spending and the excessive burden placed on citizens, **state programs often do not accomplish their objectives**. Until the state moves to true zero-based budgeting, specific programs should face sunsets. For example, government can be a social venture capitalist by funding alternative methods to reach goals through grants. Once the grants have run their course, the legislature would then have the ability to continue programs that show promise but have not yet attracted private funds.

A taxpayer protection amendment (TPA) or taxpayer's bill of rights would help rein in spending both before and after other reforms are enacted. The TPA limits the growth in government spending to the combined growth in population and inflation. If implemented in fiscal year (FY) 1994-95, the state would save over \$1.6 billion in FY2005-06. Until reforms produce savings, the amendment would limit growth. The TPA would then lock-in those savings by raising the hurdle to unrealistic spending commitments for future administrations.

At least as bad as programs that do not accomplish their objectives are those that start with the **wrong objectives**. The state pays for public school employees in non-educational positions to become teachers. It also pays for national board certification of teachers in addition to paying 12 percent more per year once they are certified. It is not clear whether these new teachers or newly certified teachers would have chosen differently without the subsidized training. In health care, Certificate of Need (CON) regulations limit the availability of new medical equipment

Sources: OSBM, State Demographics, Bureau of Labor Statistics, author's estimate

on the assumption that supply increases demand and raises prices. *FB05* eliminates CON regulations to save over \$1.5 million a year in administrative costs to the state while potentially creating a more responsive market for medical care.

Then there are the programs with **muddled or contradictory objectives**. The state's approach to preschool and day care is an example. Low-income parents receive a subsidy to send their children to

[G]overnment can be a social venture capitalist by funding alternative methods to reach goals through grants.

day care, with higher subsidies for higherrated facilities. Many of these families also receive Smart

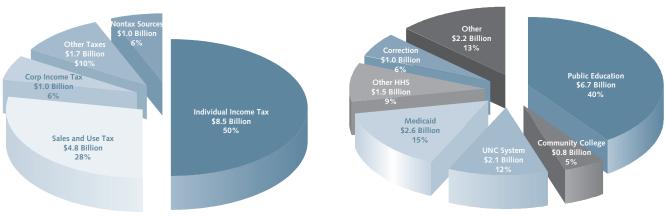

Start assistance, which is not limited by income, and some enter More at Four pre-kindergarten at no cost. *Freedom Budget 2005* proposes converting Smart Start funds to tax credits and capping the growth in More at Four and childcare subsidies at FY2004-05 levels.

Health care and education are the two industries with the greatest level of state involvement and, unsurprisingly, have the least information available for consumers to assess results. **Government focuses**

on inputs and short-term costs because that is what it measures and you cannot manage what you do not measure. Some lack of measurement is due to the activities government undertakes (public safety), but much of it is simple inertia. The state's reliance on a computer system first installed in 1974 to handle payroll and personnel is another example of the budgetary bias toward cost avoidance over productivity enhancing cost control.

The alternative state budget we propose in this report lists 152 recommendations for savings in the base budget, 38 changes to Gov. Easley's 2005-2007 expansion budget, and 30 changes to the governor's revenue proposals. Recommended General Fund savings total over \$1.1 billion in FY 2005-06 and \$1.5 billion in FY 2006-07. These savings would finance a tax reform package phasing in \$1 billion in growth-enhancing tax reductions as well as new spending in critical areas such as public employee salaries-all while maintaining surpluses of \$118 million in FY 2005-06 and \$69.6 million in FY 2006-07 that can be directed to the Savings Reserve Account, (Rainy Day Fund). Admittedly, the plan would require state leaders to set very different priorities. But it is feasible, realistic, and principled.

Principles that Work

Constitutional Authority

In the past this document has noted nine principles of fiscal responsibility derived from the North Carolina State Constitution. Article 1 of that document is a "Declaration of Rights," foremost of which (Section 1) is the "self-evident [truth] that all persons...are endowed by their Creator with certain inalienable rights; that among these are life, liberty, the enjoyment of the fruits of their own labor, and the pursuit of happiness." The fact that people have an inherent right to "the fruits of their own labor" implies that taxation should be kept as low as possible.

Section 34 holds, "Perpetuities and monopolies are contrary to the genius of a free state and shall not be allowed." In case it was not clear from the language of Section 1, this can be interpreted to mean that programs should not grant exclusive franchises or limit consumer choice to government-run service

Health care and education are the two industries with the greatest level of state involvement and have the least information on outcomes providers. This applies to ports and railroads, as much as public television, radio, or education.

Taxes are to be applied "in a just and equitable manner, for public purposes only" according to Article 5, Section 2. This principle supports eliminating tax credits under the William S. Lee Act and others. It also further guides policy to ensure that the funds spent by the government do not confer an advantage to a particular person or group.

Article 1, Sections 35 and 36 note, "A frequent recurrence to fundamental principles is absolutely necessary to preserve the blessings of liberty," and, "The enumeration of rights in this Article shall not be construed to impair or deny others retained by the people." These sections confirm the limited role

the state government should play in the daily lives of North Carolina's people. As stated in the 2003 *Freedom Budget*, "State government, in other words, is not empowered to do whatever it wants to do. Rather, it is constrained to perform its constitutional functions – to maintain law and order and to ensure the availability of true public goods – and otherwise to leave North Carolinians alone to pursue their own interests and solve their own problems without state encroachment."

Principled Guidelines

Freedom Budget 2005 recommendations fall into nine categories based on these sections of the state constitution, which we call the "Nine R's."

- Reform entitlement programs (save \$387 million in FY2005-06) Government may have a legitimate role to provide assistance to the poor, but entitlements have metastasized into aid programs for the middle class, paying for nursing home stays and daycare for the parents and children of affluent individuals. *FB05* restores meaning to the "safety net" concept.
- Redirect spending to higher priority issues (save \$310 million) Besides the general rules of budgets; North Carolina has an additional obligation under its constitution to prioritize spending. For example, *FB05* draws on research showing that teachers are the most valuable school employees. To improve student education, the state should shift spending from teacher assistants, assistant principals, and non-educational staff in public schools to classroom teachers. This budget also rescinds many recently proposed programs given the large structural deficit facing the state.
- Redirect spending to higher priority issues (save
 \$250 million) There is no right, enumerated

or otherwise, for state residents to receive government-provided art museums, aquariums, or zoos. If anything, state funding of these institutions subsidizes quality of life for those who live nearby. As long as the state provides these services, it should seek to have more of the costs defrayed by users through admission fees, donations, and other revenues.

More important to the budget is for community college and in-state university students to pay a larger portion of the costs for their education. Current tuition policy distorts demand for public universities versus private universities, acts as a regressive subsidy, and distorts the incentive for students to obtain their degrees in four years. The narrow range in prices within the UNC system has also limited the appeal of lower-tier campuses, which has in turn spurred more spending under the "Focused Growth" strategy to use the excess capacity at those schools.

· Revive free enterprise (save \$138 million)

- European countries have learned from Ireland that low tax rates attract investment. Public policy research on economic development in states affirms this. North Carolina officials, however, still believe it is better to offer free land, tax breaks, and other incentives for individual companies or industries than to create a positive environment for all businesses with low tax rates, an educated workforce, and well-maintained infrastructure. For example, the \$5 million in proposed film incentives are designed to attract projects that have proven extremely ficklemoving to the state or country providing the greatest offset to costs. According to Governing magazine, there is no reason to believe that if incentives succeed in bringing a project to the state that the project will stay once larger incentives are available elsewhere.
- Reshape the state-local government relationship (save \$118 million) — North Carolina is one

of only two states with county responsibility for some Medicaid program costs. As a result, counties must devote a rapidly growing share of their budgets to Medicaid expenses and those that can least afford it face the greatest burden. *Freedom Budget* 2005 recommends the state take back the county share by 2010, beginning in 2006-07. This will make funds available at the county level for local responsibilities such as libraries, public transportation, and airports, which receive less state funding in *FB05*. Although Medicaid is a much larger fiscal burden than the combined local responsibilities, the state is able to save money in both years of the current biennium.

• Reorganize state government (save \$134 million) — A number of states have taken steps to make their government planning and operations more efficient. North Carolina has tried some experiments in this area, building on successes and wisely abandoning some efforts. The state only received a "C+" in the Government Performance Project report

card, indicating the lack of progress in this area. North Carolina has a large public work force man-

That people have an inherent right to "the fruits of their own labor" implies that taxation should be kept as low as possible.

aged on a dated pay scale stored on similarly obsolete proprietary software and computers. The governor's budget addresses these problems and *FB05* accepts those investments.

The John Locke Foundation has illustrated the needless complexity of the executive branch's organization chart. This budget once again recommends combining the Department of Revenue, State Controller and three other agencies in a single Department of Finance; rolling up Correction, Juvenile Justice, and Crime Control and Public

Safety in an overarching Department of Public Safety; and making other changes to clean up the spaghetti bowl of responsibility.

"all government...is instituted solely for the good of the whole," which means policies designed to benefit a specific group or provide state support for group advocacy are improper. This principle also

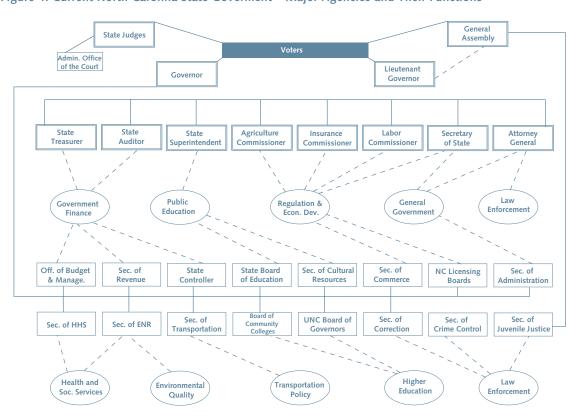

Figure 4: Current North Carolina State Government - Major Agencies and Their Functions

• Restore civil society (save \$32 million)

- Nonprofits provide many necessary services and meet a need as a third sector between the market and the government. When government steps in, it creates a false impression that the issue needs no private funds, crowding out charitable donations. Government support of a nonprofit also makes the organization less accountable and may undermine its original mission.
- Remove advocacy, waste, and race-based programs (save \$26 million) Two sections of Article
 1 further undergird this item. Section 2 states that

includes state funding of highly divisive practices. Section 19 bars "discrimination by the state because of race, color, religion, or national origin." Whether the state calls the recipients of its money "historically underutilized businesses" or minority dentists, set asides violate this principle and should end.

• Reduce biases in the tax code (\$176 million higher revenues) — The tax code is riddled with subsidies to corporations for what the state sees as good behavior. Tax credits are provided for job creation, worker training, research and development, dry cleaning equipment, and more. While trying to

improve corporate behavior, taxes worsen individual behavior. Taxes and subsidies limit consumer choice in education and discourage personal responsibility for children's health and long-term care. Tax credits can reduce the financial penalties individuals face for making worthwhile investments. A January 2005 report by the John Locke Foundation made the case for reforming the entire tax system to remove targeted tax breaks and instead tax only consumed income rather than that which is saved or invested (including in education).

Principled Guidelines

These principles have appropriately remained consistent in JLF-prepared state budgets for the last decade. Where quick action is possible, items are provided in the detailed section of this report. Other items require federal approval or simply take longer to implement. Three examples follow.

Medicaid: Gov. Easley has proposed raising copays for Medicaid enrollees to the extent allowed under federal law. This report includes additional recommendations such as providing fewer optional services, which are among the broadest in the region, and lowering reimbursement rates, which are among the highest in the region, to bring the program in line with other states; restoring a tax credit for long-term care insurance to promote personal responsibility; eliminating a proposed cost-shifting expansion; and reverting program costs to the state from the counties, which have no control over policy. These steps will reduce the base and some of the growth in Medicaid expenditures, but the program needs more thorough reforms if it is not to threaten North Carolina's fiscal health as it has already done in Tennessee and Mississippi. South Carolina's and Florida's consumer-driven, market-oriented proposals are prime examples of what can be done to promote personal saving and healthcare improvements within Medicaid.

The related Health Choice program, North Carolina's health care program for low-income children, has pulled people from the private market, which suggests it does not address a market failure. Further, the planned expansion of Health Choice and Medicaid is designed to "draw down" more federal funds. Financial games of this sort take money from citizens twice, require significant additional state

spending, and make it difficult for the state to argue legitimate need when the national budget shows large deficits.

Current tuition policy distorts demand for public universities...and the incentive for students to obtain their degrees in four years.

State Employee Benefits: The state retirement plan is generally considered a well-managed enterprise, but future retirement benefits are a large contingent cost for the state. Unlike private plans, there is no risk of the state not paying its obligation, but it still makes sense to convert to a defined contribution plan of some type. Health benefit costs are increasing for both the state and its employees. Those who can, opt out of family coverage. The state should consider more low cost insurance options to broaden its pool. Health Savings Accounts (HSAs) combined with catastrophic care insurance, high deductible policies, and other options for younger workers and their families can improve care while saving money for employees and all taxpayers.

Privatization: The state's ancient payroll system is a stunning case of how the state government short-changes itself when it tries to handle too many services in-house. Each agency has its own information technology staff, and many systems within agencies as well as across them cannot share information. Some agencies have their own printing shops, while others manage their own fleets of vehicles. Two approaches in concert can improve productivity and lower costs for the state. Illinois has combined IT, personnel, benefits, communications, property man-

agement, and procurement for all state agencies in the Department of Central Management Services. In addition to cross-departmental coordination, a central system would seek competitive bids on services and look for buildings and other assets to sell (with covenants as necessary). North Carolina should also sell all assets and inventory of the Alcohol Beverage Control system, with proceeds optionally going to local governments.

Conclusion

Budgets reflect priorities, and neither Gov. Easley's budget nor this document is an exception. Where the governor includes \$741 million in higher taxes to provide \$1 billion for new or expanded programs, however, *Freedom Budget 2005* reduces taxes and spending below the levels of FY 2004-05.

North Carolina and other states manipulate their Medicaid payments to draw down extra dollars

The state can move toward lowering rates or eliminating the tax on capital gains and corporate income by eliminating special subsidies and tax breaks to businesses that are now part of the state's so-called economic development program.

from Washington, justifying it as "our fair share." These federal dollars also are not free for the state, they are more like the 90 percent discount on a \$30,000

country club membership—you still have to find \$3,000. When most states engage in the same scheme it means less money at both the federal and state level is available for taxpayers, other programs, or deficit reduction. Further, when state legislators

place a priority on setting aside over \$20 million in unconstitutional discretionary funds to reward their friends, they undermine public faith in government and the budget process.

The Tax Foundation shows that state and local taxes in North Carolina will take 10.0 percent of personal income in 2005, up slightly from 9.9 percent a decade earlier. Federal taxes, however, went from 20.0 percent of North Carolinians' personal income to 17.8 percent. At the same time, the average share of personal income going to state and local taxes in the region fell from 9.6 percent to 9.5 percent, leaving North Carolina at a greater disadvantage on this important contributor to economic growth.

In a sign that the half-cent sales tax that was originally a temporary measure is now permanent, Senior Policy Advisor for Fiscal Affairs Dan Gerlach said, "When we can bring it [the sales tax] down, we will." *Freedom Budget 2005* brings it and other taxes down while still finding room to run a surplus.

It's about priorities.

About the Author

Joseph Coletti is Fiscal Policy Analyst at the John Locke Foundation. He has served as editor of newsletters and briefing books on the Japanese economy and U.S.-Japan relations. Coletti led marketing research and forecasting projects with J.D. Power and Associates in Detroit and Tokyo. He also served as Director of Policy and Communications for the U.S. – Japan Business Council in Washington, D.C., before joining the Locke Foundation. Coletti received a bachelor's degree from the University of Michigan and a master's degree from the Johns Hopkins University Paul H. Nitze School of Advanced International Studies.

About the John Locke Foundation

The John Locke Foundation is a nonprofit, nonpartisan policy institute based in Raleigh. Its mission is to develop and promote solutions to the state's most critical challenges. The Locke Foundation seeks to transform state and local government through the principles of competition, innovation, personal freedom, and personal responsibility in order to strike a better balance between the public sector and private institutions of family, faith, community, and enterprise.

To pursue these goals, the Locke Foundation operates a number of programs and services to provide information and observations to legislators, policymakers, business executives, citizen activists, civic and community leaders, and the news media. These services and programs include the foundation's monthly newspaper, *Carolina Journal*; its daily news service, *Carolina Journal Com*; its weekly e-newsletter, *Carolina Journal Weekly Report*; its quarterly newsletter, *The Locke Letter*; and regular events, conferences, and research reports on important topics facing state and local governments.

The Foundation is a 501(c)(3) public charity, tax-exempt education foundation and is funded solely from voluntary contributions from individuals, corporations, and charitable foundations. It was founded in 1990. For more information, visit www. JohnLocke.org.

"To prejudge other men's notions before we have looked into them is not to show their darkness but to put out our own eyes."

JOHN LOCKE (1632-1704)

AUTHOR, TWO TREATISES OF GOVERNMENT AND FUNDAMENTAL CONSTITUTIONS OF CAROLINA
